### LEADING THE LEAD-FREE PIPE MOVEMENT

Lead (Pb on the Periodic Table) is one of the most naturally occurring elements on the planet. With little or no known biological benefit to humans, Lead causes a lot of damage and leads to poisoning when imbibed.

The lead can easily leach or dissolve into the water from transportation pipes and can be fatal. High blood lead levels in children can cause consequences that may be irreversible including learning disabilities, behavioural problems and mental retardation.

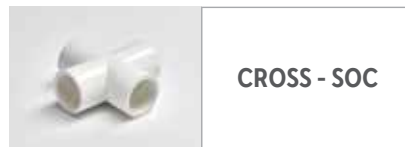

The world over, Lead-free piping is the way forward to transport potable water. Something we've been doing at Astral Pipes for over many years now. Our lead-free pipes have exceeded all quality benchmarks and continue to be one of our bestselling products.

## AIR ADMITTANCE VALVE

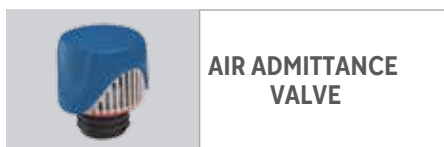

### NEGATIVE PRESSURE ELIMINATOR FOR UNRESTRICTED SEWAGE SYSTEM

Astral Air Admittance Valves respond to the negative air pressure created in a sewage system when sanitary facilities are used. Sewage flow can produce negative pressure and then water is drawn out of the siphons. Air admittance valves help to provide air supply to the sewage system and thus compensate for negative air pressure. Astral Air Admittance Valves are manufactured with latest European standards and their working temperature range is from -20°C to +60°C.

## DOUBLE WALL CORRUGATED (PROFILED) PIPE

With smooth internal and corrugated (profiled) external surface for non-pressure underground drainage and sewerage.

Pipes for Non Pressure Underground Drainage and Sewerage Application

“D-Rex” is an innovative product aptly described as structured wall piping system with smooth internal and corrugated (profiled) external surface. The corrugated (profiled) external surface of the D-Rex pipes gives the product excellent ring stiffness (load bearing capacity). Unlike plain pipes, D-Rex pipes do not deform under vehicular traffic load. Furthermore, since these pipes are moderately flexible, they can be aligned comfortably even in gradually bending paths.

The inner wall, which is fused with the outer wall, is smooth and facilitates laminar flow of liquids / slurry. This results in lesser possibilities of pipe clogging, deposition of debris in the pipe path etc.

## Plastic corrugated lateral Drain Pipe With Perforation and Synthetic Filter

In western developed countries Farm Drainage System with SSD Methods have been established long back for the improvement of the crop growth. Appreciative work has been in the mid of 20th Century and accepted in the nineties. Only the maintenance & inspection work is looked after. A substantial percentage of growth in crop yields have been recorded. In India unfortunately very little has been done so far as compared to the the magnitude of the fertile and salt affected lands.

### WIDE APPLICATIONS

• Land/farms • Canal • Highways • Sports Fields (Golf Course And Stadium) • Building Foundation • Construction Sites • Airports • Podium Gardens Etc.

### FEATURES

• The unique corrugated profile gives excellent flexibility to the pipe without affecting the stiffness. • Pipes can sustain heavy earth loads • Available in longer lengths, thereby reducing number of joints • Available in coil form, thereby facilitating automated laying • Well designed perforations giving adequate water inlet area.

### ADVANTAGES

• Significant reduction in soil salinity of farmlands • Water Logging is avoided to a considerable extent. • Excellent Soil Airing • Long term solution to avoid salinity recurrence. • Ideal moisture content is maintained in the soil. • Improved yield and crop health.
